CCTV Surveys

### CCTV Surveys

Drains and pipes are very difficult to access since the majority of them are mostly underground. Consequently this prevents companies that work in this industry to identify the exact cause and extent of the blockage or damage.

At Civil Engineering Safety we provide a CCTV service using our wincam system to identify such blockages and damaged pipes. Our engineers lower and examine the drain using the CCTV camera. This service is not only cost effective but quick in identifying the issue.

Following a site visit we provide our customers with a DVD of the survey along with a written report.

This service is available both day and night shifts to suit our clients requirements.

Please contact our head office for further information and to find out about the excellent rates that we offer for this service.

For further information regarding our CCTV Surveys please contact us by calling **01277 812840**, email [info@civilsafety.co.uk](mailto:info@civilsafety.co.uk) or visit our website [www.civilengineeringsafety.co.uk](http://www.civilengineeringsafety.co.uk).
